

CHEMICAL/PROCESS ENGINEER – ENVIRONMENT

Northland Power has an opening for a chemical/process engineer whose responsibilities will cover the company's environmental commitments, and health and safety.

The company's dedication to meeting and exceeding environmental standards resides in its corporate DNA. As a result, this is an important role for a passionate engineer who wants to make a worthwhile contribution to the environment.

The individual will have good technical and functional knowledge, and be an effective communicator in a role that bridges the company's operations and governmental bodies.

This is an opportunity to learn, to contribute and to enjoy collaborating with other impassioned engineers and operating personnel who believe creative technology can continue the coexistence of power generation and the environment.

Responsibilities

1. Prepare quarterly continuous emission monitoring system reports.
2. Verify data and edit environmental reports submitted from throughout the company.
3. Assemble data and assist with permit applications.
4. Generate internal summary reports to the Executive Office.
5. Liaise with and advise operating personnel in locations across Canada.
6. Support plant operating personnel with technical advice.
7. Manage and work with third-party contractors and consulting engineers.
8. Assist with routine audit processes in environment, health and safety, and quality management areas.
9. Maintain a knowledge of applicable current legislation in plant jurisdictions.

Experience and Competencies

1. P. Eng., or working towards a P. Eng. designation.
2. Chemical or process oriented.
3. Two+ years of experience, with a manufacturer or consulting engineering firm.
4. Must have environmental experience.
5. Some knowledge of workplace health and safety.
6. An understanding of ISO.
7. An ability to interpret information from various sources, including non-professionals, and write clear, concise reports.

Application
